

EDGE™ DIVING SYSTEM FOOTPRINT & JIG INFO

INTER-FAB

inter-fab.com

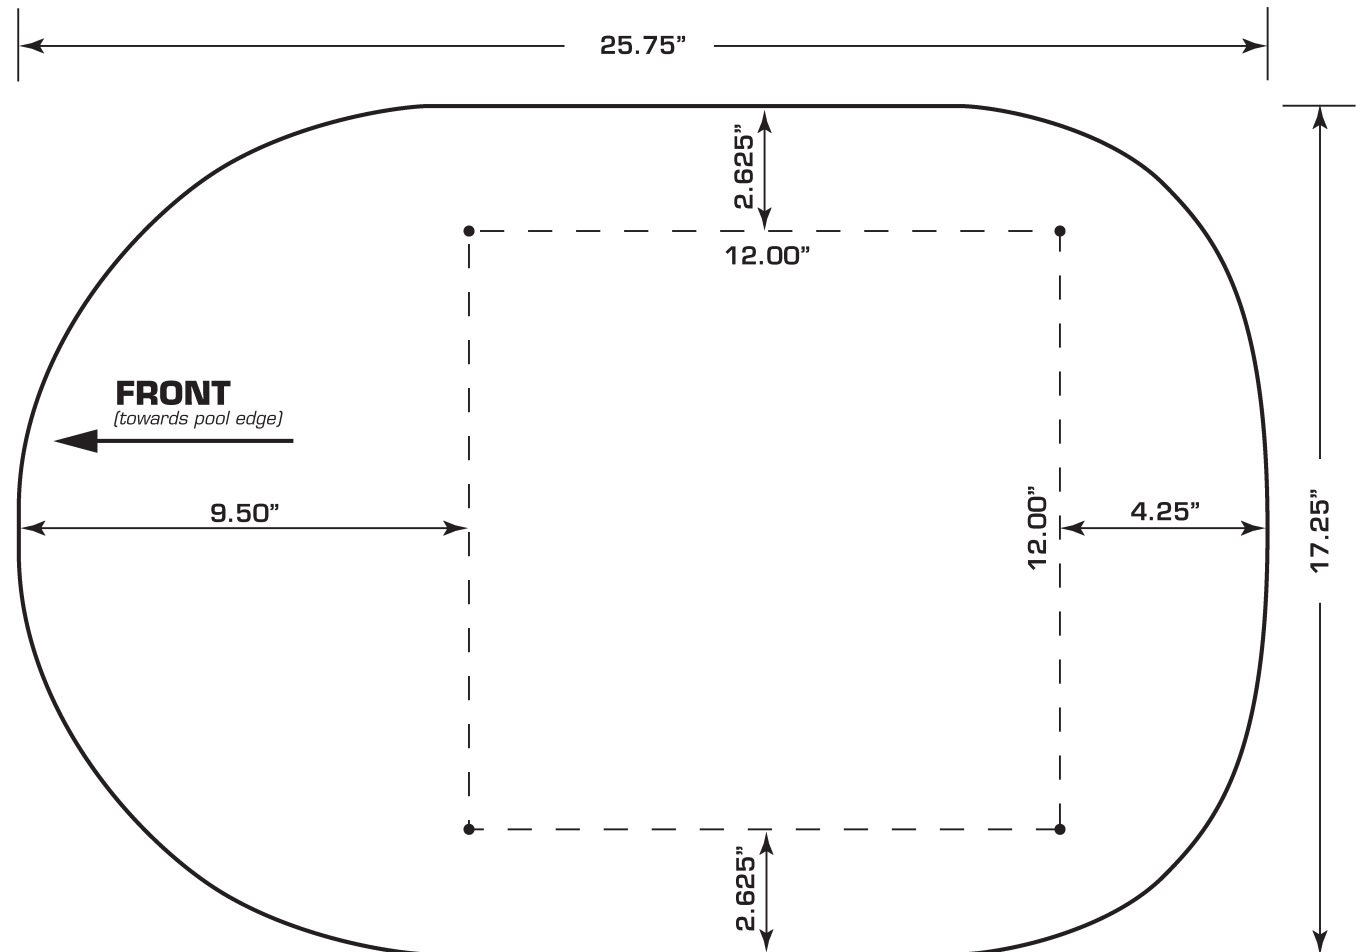

DIAGRAM NOTES:

The overall size dimensions of the Edge Diving System is shown **outside** the footprint.

Measurements indicated on the dotted lines are the centerline measurements between the jig bolts. (The jig is 12" on center.)

Inter-Fab Inc. manufactures the Edge Diving System for both new construction applications and specific retrofit/replacement applications. The Edge Diving System is designed to fit the same 12" on center jig pattern of the Techni-Spring steel base, and can be used to replace those units in the field provided the existing jig is in good condition.

As with any replacement or retrofit installation, the installer **MUST** check the original jig installation to make sure it complies with all ANSI/NSPI-5 2003 standards. Inter-Fab cannot warranty a retrofit installation that does not comply with the water envelope and placement standards.
